The Problem With Crypto Payments Today

Zero Privacy

Every blockchain transaction is fully public. Intent, volume, and business context are visible to anyone.

Cross-Chain Chaos

Moving value across chains is fragmented, slow, and technically complex — even for developers.

No Merchant Tools

Crypto-accepting merchants have no unified dashboard, no analytics, no usable payment management layer.

Introducing StreamPay

Privacy-aware, cross-chain payment infrastructure — built for merchants, developers, and the multi-chain world.

Privacy Abstraction

We separate value settlement from business context.
Transaction intent stays off-chain.

Cross-Chain Simplicity

Users pay from any chain. StreamPay handles routing, swapping, and settlement automatically.

Merchant Dashboard

Full payment visibility, order context, and analytics — without exposing data on-chain.

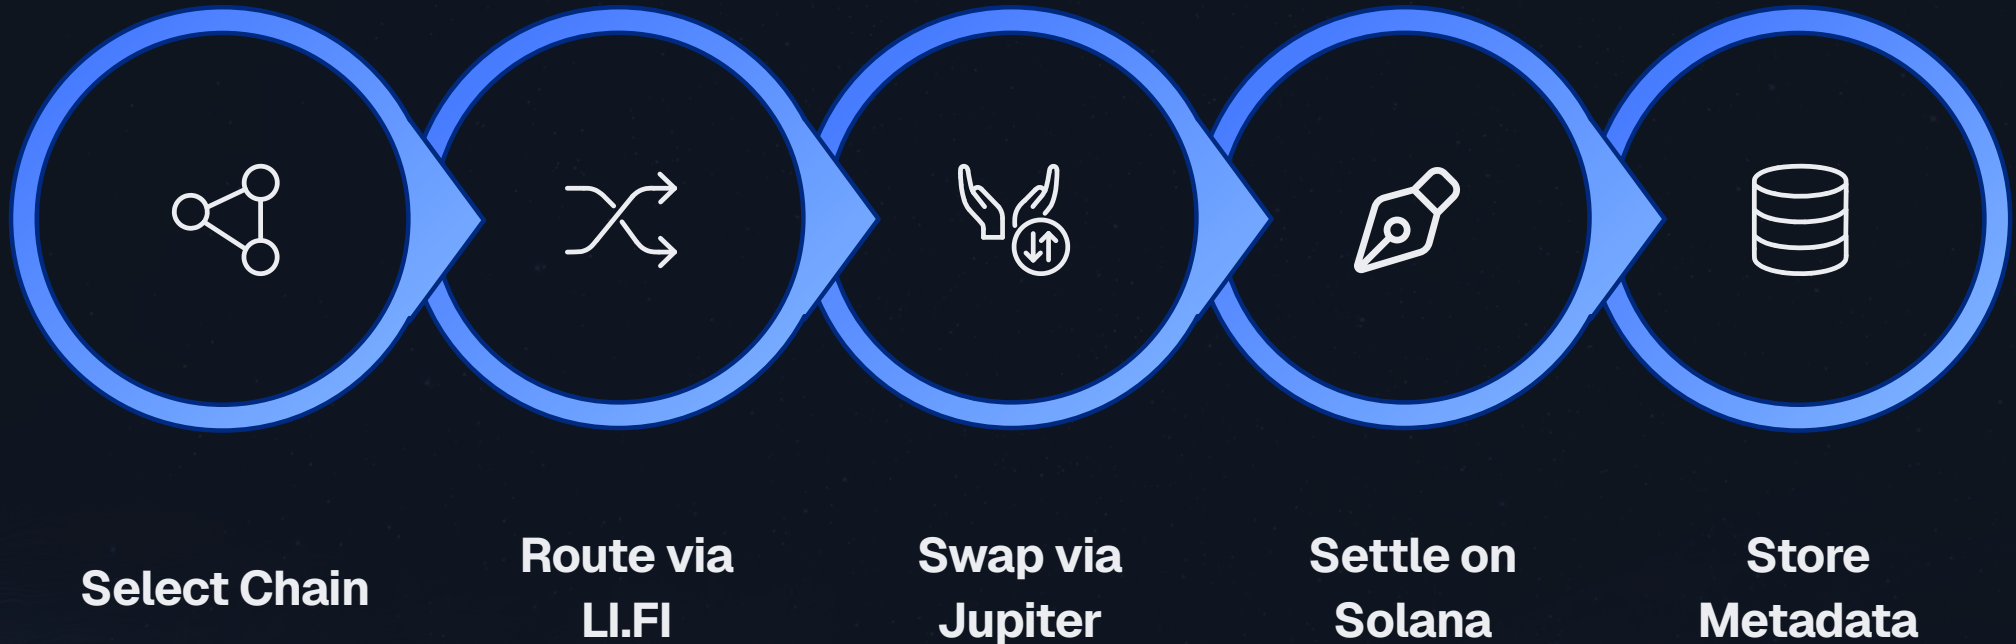

Developer-First SDK

Drop-in SDK for any team to integrate private, cross-chain payments in hours, not weeks.

How It Works

A seamless payment experience under the hood — complex routing made invisible to the end user.

The user sees a simple payment screen. The merchant sees full context. The blockchain sees only what it needs to.

Real Traction. Real Code. Live on Chain.

100+

SDK Downloads

Early developer adoption within weeks of launch

Live

Deployed App

Fully working product with real on-chain transactions executed

1

Unified SDK

One integration for cross-chain, private payments — ready for production

This isn't a prototype. StreamPay is **live, deployed, and processing real transactions** — with a growing developer community already building on top of it.

Why StreamPay Wins

What Makes Us Different

Existing tools force a choice: use crypto *or* have usability. StreamPay delivers both.

Privacy Layer

No competitor abstracts business context from settlement at the infrastructure level.

Cross-Chain by Default

Not a bridge — a full routing and settlement layer. Pay in ETH, settle in SOL.

Built for Builders

Our SDK means any developer can ship crypto payments — no blockchain expertise required.

Monetization

Multiple revenue streams that **scale automatically with payment volume**.

Transaction Fees

A small fee on every payment processed through the StreamPay network.

Privacy Premium

Merchants and users pay a premium for enhanced private payment flows.

SaaS Dashboard

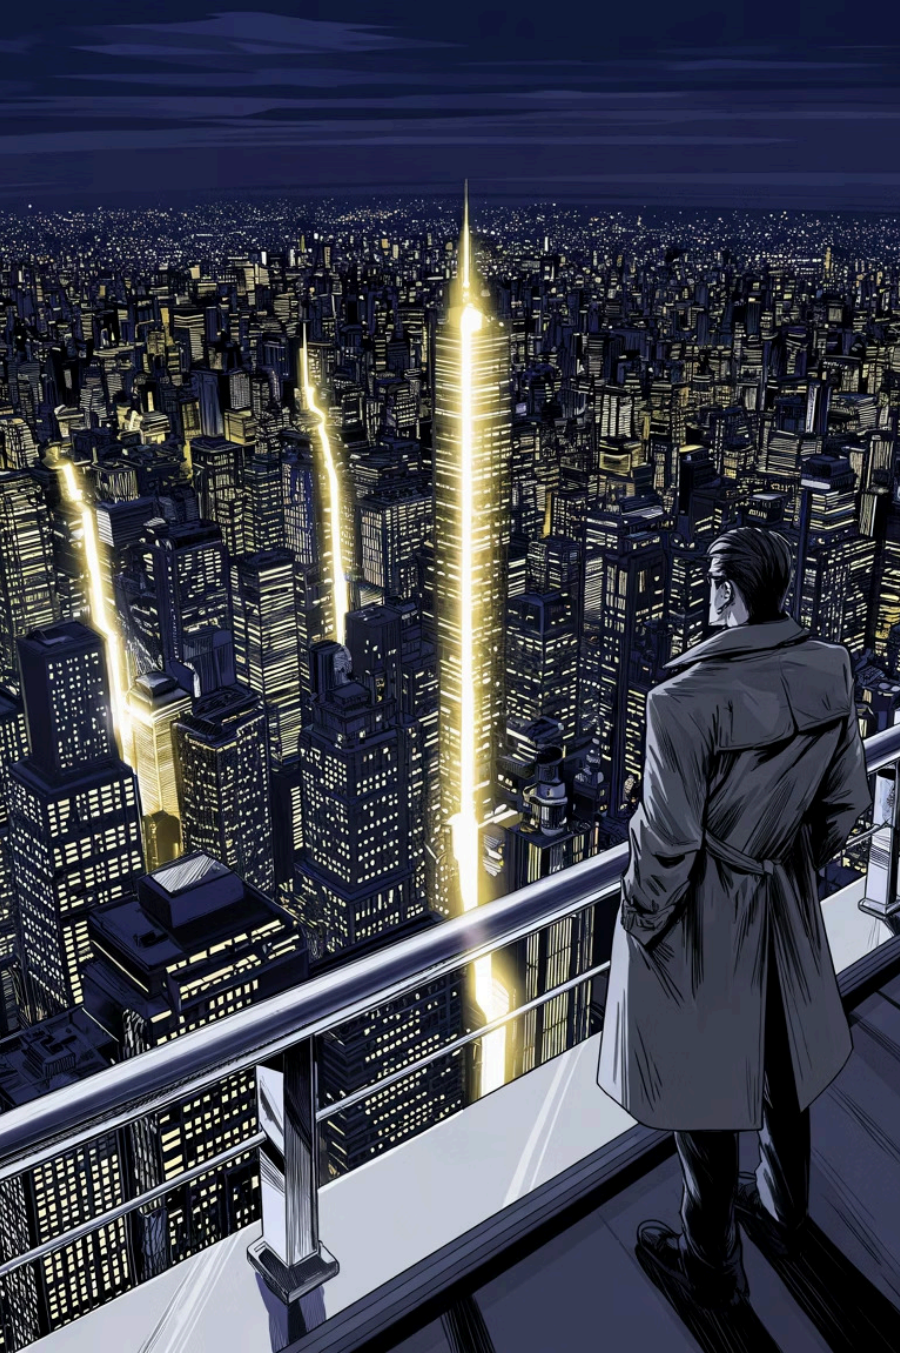

Monthly subscriptions for merchant dashboard access, analytics, and reporting.

API Pricing

Usage-based pricing for developers building on the StreamPay SDK and API layer.

✓ As payment volume grows, revenue scales automatically — no linear cost increase required.

The Future We're Building

1

Now

Live app, SDK deployed, real transactions, merchant dashboard in production.

2

Phase 2

zk / shielded transactions for fully private on-chain payments. Compliance viewing keys for regulated enterprise use.

3

Phase 3

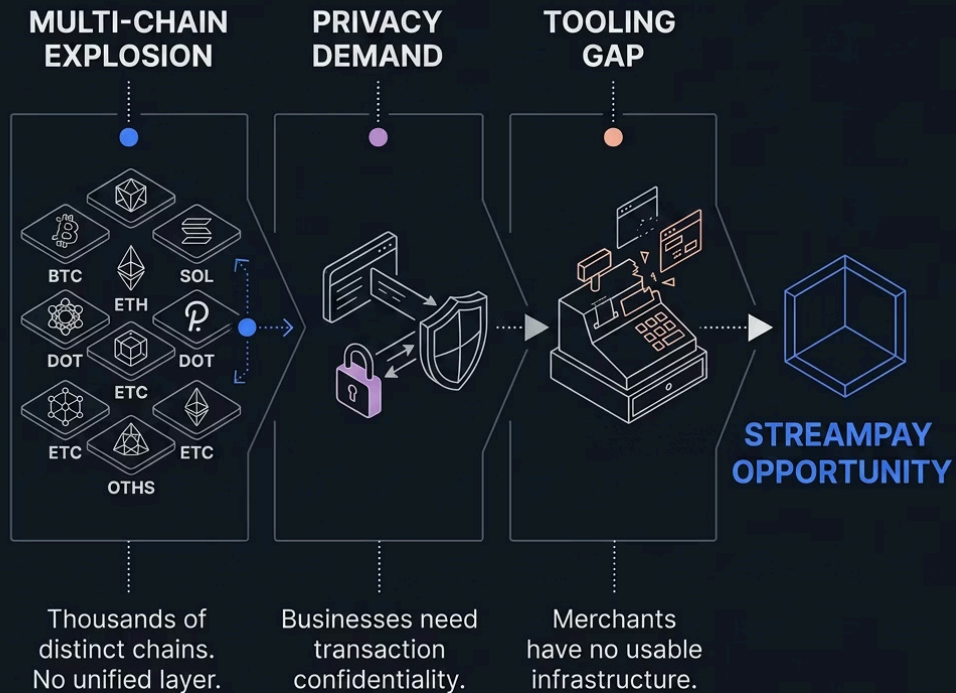

Real cross-chain execution — native multi-chain settlement without abstraction layers.

4

Vision

Enterprise-grade payment infrastructure. The global payment layer for Web3.

Why Now?

The Moment Has Arrived

The multi-chain ecosystem has exploded — but payment infrastructure hasn't kept up. Businesses want crypto payments; they just can't manage them. Privacy expectations are rising globally. Regulatory frameworks are maturing, creating demand for compliant private payments.

StreamPay is entering the market at the exact inflection point where all three forces converge.

An aerial view of a city skyline, likely New York City, at sunset. A bright, vertical beam of light cuts through the center of the image, illuminating the buildings and creating a strong contrast with the dark sky. The buildings are silhouetted against the bright light, and the overall color palette is dominated by deep blues and oranges.

The Stripe for Private, Cross-Chain Crypto Payments

StreamPay isn't a hackathon experiment — it's **scalable payment infrastructure** for the multi-chain world. Live product. Real traction. Massive market. The future of payments is private, seamless, and cross-chain.
